

Externalize costs without breaking the data value chain

You're invited to IDBS' live webinar

Wednesday, September 17, 2014
London 3pm | New York 10am

Join **Andy Vines** of IDBS and **Justin L. Gazard** of Pfizer Inc. as they explore successful approaches to externalization in the drug discovery space, covering:

- **Approaching externalization** - understanding your options
- **Making externalization a reality** - getting the infrastructure right
- **Successful externalization** - don't compromise on the efficiency of your data value chain
- **Externalize costs, internalize value** - achieving results that matter

[Find out more and register »](#)

Are you ready to reap the rewards of externalization?

Externalizing discovery screening processes provides opportunities for all R&D stakeholders to focus resources on in-house strengths, but it's vital to safeguard the efficiency and integrity of your data value chain.

The boom in externalization has brought about new ways of working collaboratively among organizations looking to outsource certain stages of the discovery life cycle, specialist research service partners, and academia.

But taking advantage of the benefits of externalization means mitigating the risks of extended decision cycle times and the issues around data shareability, its ease of incorporation back into in-house-systems and its integrity and transparency.

Join us on September 17 to find out more about how data value can be preserved across externalized, collaborative ways of working.
