

Provantis®

Integrated preclinical software

Provantis® is a modern, fully integrated Windows-based solution suite for all organizations around the world engaged in non-clinical evaluation studies. From single-user pathologists to full-function global toxicology/pathology laboratories, Provantis streamlines processes and workflows with straightforward, intuitive functionality for simple and complex studies within both GLP and non-GLP environments.

Pathology

A solution supporting the pathologist in managing data for necropsy, histopathology and organ weights. Using the General Toxicology module with Pathology allows review of all in-life data, including mass tracking.

General Toxicology

An integrated module that supports the toxicologist in conducting all study types, for any species, duration or administration route.

Dispense

Dispense maintains a full record of test item usage right from the initial receipt through formulation/dispensing activities to disposal.

Data Import

This module enables users to import external data into Provantis® through a secure and validated process. Flexibility with single clicks, users can import a range of data files such as Estrous Cycle data, Clinical Pathology data, Bone Assessment data and external sample analysis.

Tables & Statistics

This module enables the production of tabulated study-based data, and includes an integrated decision tree providing sophisticated statistical analysis.

Toxicology Resource Planning

A fully integrated solution allowing you to plan and manage studies and programs, allocate resources, benchmark against past studies and plan workloads for the future.

Reproductive Toxicology

Supporting the reproductive toxicologist or teratologist in conducting all study types, including ICH protocols, multigeneration, developmental toxicity, behavioural and developmental neurotoxicity studies.

Protocol

The Protocol module provides all the flexibility required to support today's modern study designs, capturing all of the information needed to drive Provantis® data collection, while ensuring adherence to study requirements. Additionally, the IACUC can be managed and monitored as part of the standard workflow, ensuring automated and efficient compliance. Users of the protocol module can easily create labels of all types for the full life-cycle of a study.

Report Assembly

A value-added and integrated solution for the preparation and assembly of all study-related documentation including final reports, protocols, data tables and statistical analysis.

Logbook (New!)

The Logbook module is designed to replace GLP and Non-GLP paper data. Utilizing an easy-to-navigate interface and a flexible form designer, users can re-create paper forms on the spot. Logbook provides a safe, secure repository for a wide range of information that would traditionally be kept on paper notebooks and forms such as Study Diary, Vet Alerts, Facility Management logs, Sampling, Histology, Husbandry Checks and many more.

Clinical Pathology

The Clinical Pathology module manages instruments, sample requests and associated result data. Fully integrated throughout the Provantis® system.

Animal Management

This module deals with all aspects of 'Animal Management' throughout the duration of a study including subject placement (randomization), re-housing and implant number assignment.

Supported by more users than all competing systems combined, Provantis® enables data to be collected, analyzed and shared across an organization of any size, at any stage of a study, from compound receipt through to final report production.

The integrated Provantis® modules operate in the Microsoft Windows environment, either as traditional desktop-client programs (server-based applications) or through our hosted online offering, allowing customers the ultimate freedom to choose the most appropriate platform for their users.

Accessing Instem Solutions On-demand

Software-as-a-Service (SaaS)

Using Instem's hosted remote delivery model offers simpler, more cost effective ways to provide software functionality, maintenance, and support over the Internet. Clients have complete in-application access to their data, just as if their software was deployed on-site, yet they no longer require additional hardware or dedicated resources. Removing the need for on-site software ensures clients can access the latest major releases of Instem software without the delays and costs traditionally involved with site-based installations. Instem utilizes state of the art data centers, which are in use by clients around the world running GLP and non-GLP studies. Instem's turn-key subscription includes all 3rd party licenses such as Oracle and SAS, along with training, maintenance, unlimited help desk support and Instem's Validation Pack.

Since 2005, Instem has been providing its clients with the ability to access software solutions affordably from any location that offers connectivity to a network or the Internet using a standard Web browser, 24 hours a day; seven days a week.

Specialized Solutions

Tailored services. Total success.

Instem is once again delivering the exceptional client experience, offering the Specialized Solutions program to clients needing a more tailored approach to implementation, training, validation and support services.

Dedicated client specialists and extended customer care

Perfect for:

- Smaller laboratories
- Academic or government research facilities
- Non-GLP environments
- Non-traditional toxicology study programs

The Specialized Solutions program features a Continuous Learning Model, helping users learn faster and retain more without the distractions and disruptions other vendors may cause during "deliver everything at once" implementations. Using this exclusive method, clients stay connected with Instem when they need them the most, which often is for one year following their first Provantis study. Clients enjoy ON-demand access to educational industry experts to help with a new study design, more advanced learning or anything else that can maximize their use of Instem software solutions.

Provantis® users come from a variety of markets, including:

- Pharmaceutical
- Contract Research
- Chemical
- Agrochemical
- Academia
- Government Research Institutes
- BioTech
- Medical Device Testing

Every Provantis® user has unlimited access to live global support to ensure their operational effectiveness and success.

Instem's highly skilled Services team offers a broad range of professional services, including:

- Business & System Analysis
- Data Management
- Data Migration
- Systems Definition
- Project Management
- Validation
- Change Management
- Certified Training
- Solution Development
- Installation
- Remote System Deployment

About Instem

Instem is a world-leading information solutions provider to the life sciences - accelerating drug and chemical development by increasing client productivity and enhancing the processes that lead to safer, more effective products.

Instem supports clients around the world through full service offices in the United States, United Kingdom and China. Instem additionally has resource locations in India and a full service distributor based in Japan.
